WHY KEEP A SAKE JOURNAL?

The difference between drinking sake and understanding sake is attention. A tasting journal helps you discover patterns — which styles you gravitate toward, how rice polishing and yeast shape flavor, what regions deliver the character you love. Over time, your journal becomes your personal sake roadmap.

The Five S's of Sake Tasting

- 1. See.** Pour the sake into an ochoko or white wine glass. Observe the color — most premium sake is water-clear, but some styles show a faint yellow or cloudy white. Clarity and viscosity hint at the brewing method.
- 2. Swirl.** Gently rotate the vessel to expose the sake to air. This releases aromas. Notice the legs (tears) that form on the glass wall — thicker legs can indicate a richer body or higher sweetness.
- 3. Sniff.** Bring the vessel to your nose and take short, gentle sniffs. Ginjo-grade sakes offer dramatic fruity and floral aromas. Try to identify melon, apple, pear, banana, anise, or rice notes. Your nose reveals more than your palate.
- 4. Sip.** Take a small sip and let it spread across your tongue. Note the sweetness, acidity, body, umami, and bitterness. Sake has a unique savory dimension (umami) that other beverages lack. The texture is just as important as the taste.
- 5. Savor.** Pay attention to the finish — the sensations that linger after you swallow. Some sakes are clean and crisp (tanrei); others are rich and persistent (nojun). Note how long it lasts and whether the aftertaste changes character.

Pro Tip: Temperature transforms sake dramatically. Try the same sake chilled (5–10°C), at room temperature (15–20°C), and warmed (35–45°C). Each temperature reveals different aromas and flavors. Junmai-style sakes often shine warm; Ginjo-grade sakes are best chilled.

Sake Types Guide

Every classification has its own character and purpose

Junmai	Pure rice sake — no added distilled alcohol. Rice polished to at least 70%% remaining (30%% milled away). Rich, full-bodied with deep umami and rice-driven flavors. Served at various temperatures. Best for: Warm service, food pairing, exploring tradition
Honjōzō	A small amount of brewer's alcohol is added to extract aromas and lighten the body. Rice polished to at least 70%% remaining. Cleaner and lighter than Junmai but still rice-forward. Best for: Easy drinking, warming, everyday meals
Ginjō	Highly polished rice (at least 60%% remaining) with long, low-temperature fermentation. Complex fruity and floral aromas. May contain a small amount of added alcohol. Elegant and aromatic. Best for: Chilled service, special occasions, sipping
Daiginjō	The pinnacle of the brewer's art. Rice polished to at least 50%% remaining (often much more). Extraordinary aromatic complexity, refined texture, and layered flavors. Premium pricing reflects the labor and rice waste. Best for: Connoisseur tasting, gifts, contemplation
Junmai Ginjō	Ginjo-level polishing (60%% remaining) with NO added alcohol. Combines ginjo aromatics with junmai body and umami. A beautiful balance of elegance and substance. Best for: Food pairing, discovering balance
Junmai Daiginjō	Daiginjo-level polishing (50%%+ removed) with NO added alcohol. The ultimate expression of pure rice sake at the highest polish level. Rare, expensive, and transcendent. Best for: The finest occasions, deep exploration
Nigorizake	Coarsely filtered or unfiltered sake with visible rice sediment. Cloudy white appearance with sweet, creamy texture and lactic flavors. Some are unpasteurized (nama-nigori) for lively fizz. Best for: Dessert pairings, adventurous drinkers
Namazake (Nama)	Unpasteurized sake — fresh, vibrant, and lively. Must be kept refrigerated. Available across all style categories. Crisp aromatics with a youthful energy that pasteurized sake cannot match. Best for: Spring and summer, freshness seekers

Sake Regions Guide

Where your sake is born shapes what it tastes like

Japan — Niigata	The sake capital of Japan. Cold winters and pure snowmelt water produce crisp, clean, dry sakes known as tanrei karakuchi. Home to legendary breweries and the annual sake competition. The benchmark for refined sake.
Japan — Hyōgo	The largest sake-producing prefecture, growing Yamada Nishiki — the king of sake rice. Home of Nada, one of Japan's most historic brewing districts. Diverse styles from rich and full to elegant and dry.
Japan — Kyōto (Fushimi)	Famed for soft, low-mineral water (gosui) that produces gentle, rounded, feminine sakes. Historic kura line the Fushimi district. Known for balanced, food-friendly styles with elegant aromatics.
Japan — Hiroshima	Hard water with high mineral content produces bold, full-bodied sakes with pronounced sweetness. A major center for ginjo-style sake production. The hard water drives vigorous fermentation.
Japan — Akita	Cold-region brewing at its finest. Long winters allow slow, low-temperature fermentation for refined flavors. Known for crisp, clean sakes with elegant rice character. Famous for sake rice variety Yamada Nishiki and Sake Komachi.
Japan — Yamagata	The first prefecture to earn a collective geographic indication for premium sake. Known for soft water, elegant ginjo aromatics, and a balanced style. Home to several award-winning kura.
Japan — Fukui	Coastal prefecture on the Sea of Japan, known for clean brewing water and traditional methods. Produces full-flavored sakes with depth and character. Home of the legendary Banshu Iwai sake rice.
Japan — Iwate	Northern cold-climate brewing region. Produces clean, dry, well-structured sakes. Famous for the Nanbu Toji guild — one of Japan's most respected brewing traditions. Crisp and food-friendly.

Tasting Terminology

Speak the language of sake

Seimaibuai (Rice Polishing Ratio)

The percentage of the rice grain that remains after polishing. Lower numbers mean more of the grain is milled away. 70%% remaining = Junmai/Honjozo; 60%% = Ginjo; 50%% or less = Daiginjo. More polishing removes proteins and fats that cause off-flavors, resulting in cleaner, more refined sake.

Nihonshudo (Sake Meter Value)

A measure of sweetness vs. dryness. Also called SMV. Zero is neutral; positive numbers (e.g., +5) indicate drier sake; negative numbers (e.g., -5) indicate sweeter sake. It measures the density of the sake relative to water.

Kōji

Aspergillus oryzae mold cultivated on steamed rice. Essential to sake brewing — it converts rice starches into fermentable sugars (the role malting plays in beer). The quality of koji determines the quality of the sake. No koji, no sake.

Umami

The fifth taste — savory depth. In sake, umami comes from amino acids produced during fermentation. Junmai-style sakes typically have more umami than ginjo styles. Umami-rich sake pairs beautifully with savory foods.

Tanrei Karakuchi

A tasting descriptor meaning crisp, clean, light, and dry. The quintessential Niigata style. Associated with snow country water and cold-region brewing. The opposite of nojun (rich and full-bodied).

Kura (Brewery)

The traditional term for a sake brewery. Also called sakagura. Japan has approximately 1,200 kura, each with its own water source, yeast strains, and brewing philosophy. Many kura have operated for centuries within the same family.

Yamahai / Kimoto

Traditional starter methods that produce sake with deeper body, higher acidity, and more complex flavors. These methods forgo the modern shortcut of adding lactic acid, instead allowing natural lactic bacteria to develop over weeks. Bold, gamey, and food-friendly.

Namazake (Unpasteurized)

Sake that has not been heat-treated. Almost all sake is pasteurized twice to stabilize it; nama skips one or both pasteurizations. Result: fresh, vivid, aromatic, with a slight effervescence. Must be refrigerated and consumed promptly.
